

# How to Encrypt and Decrypt Text Using SHA

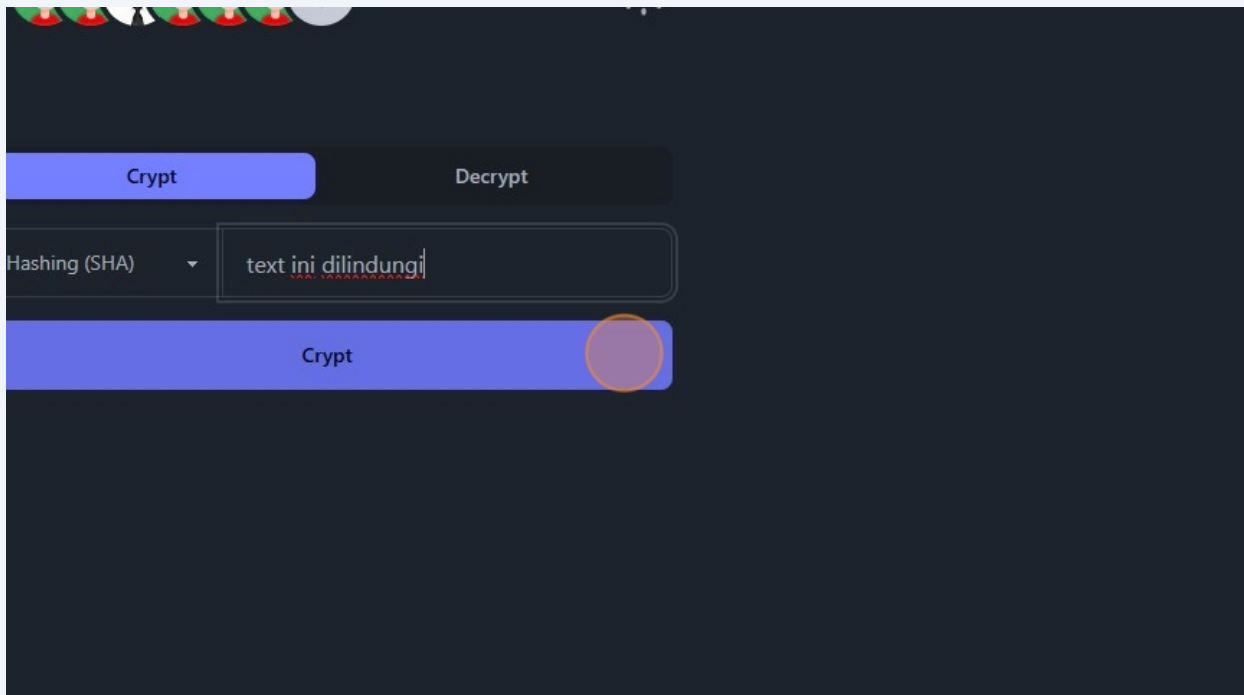

1 Navigate to <http://localhost:5173/>

2 Click the "write something to encryption..." field.

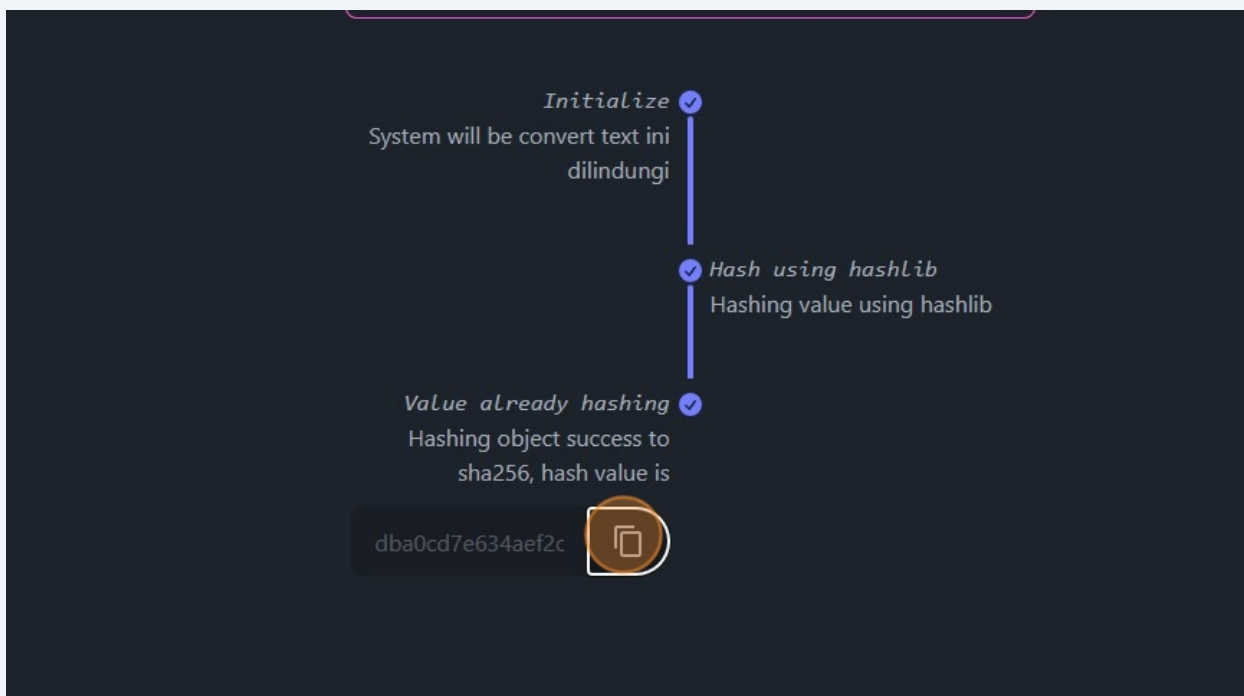

3 Type "text ini dilindungi"

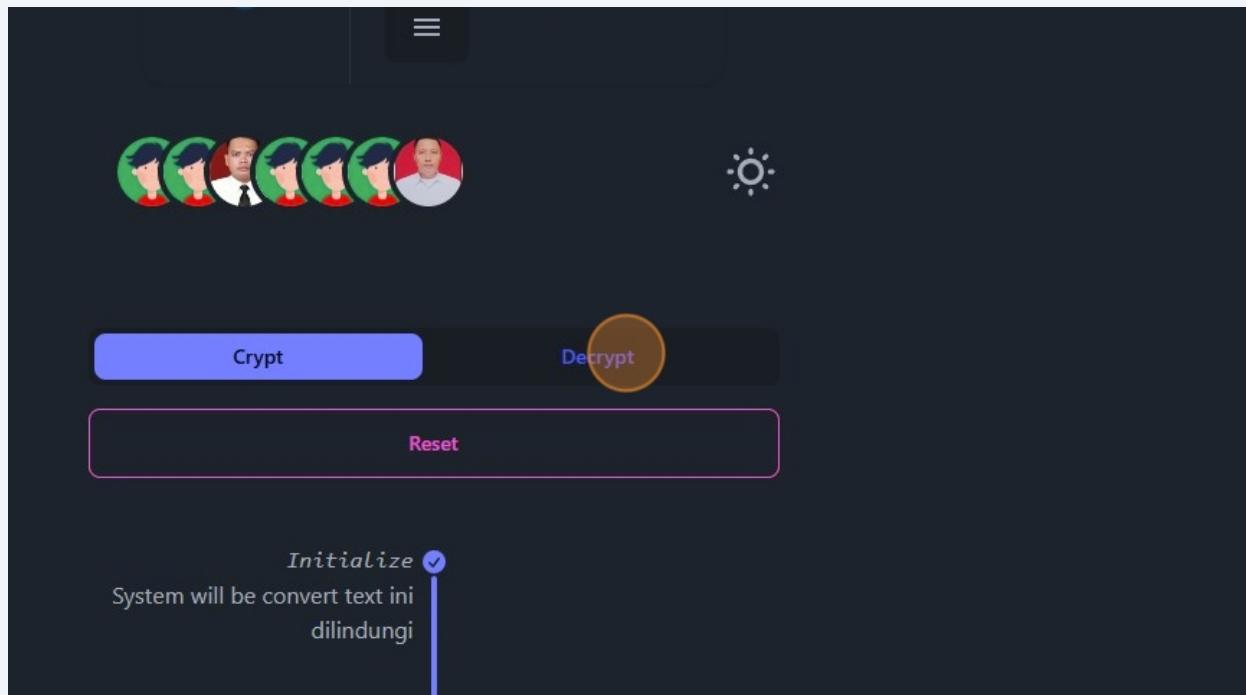

4 Click "Crypt"

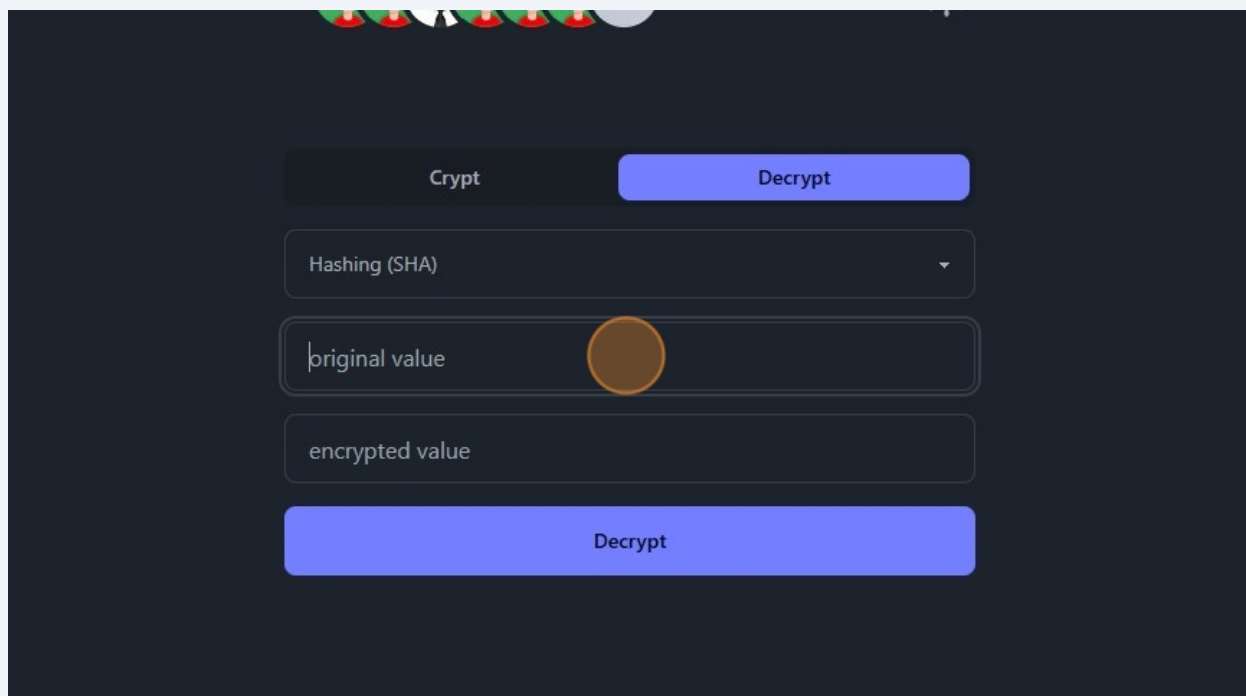

5 Click this icon.

6 Click "Decrypt"

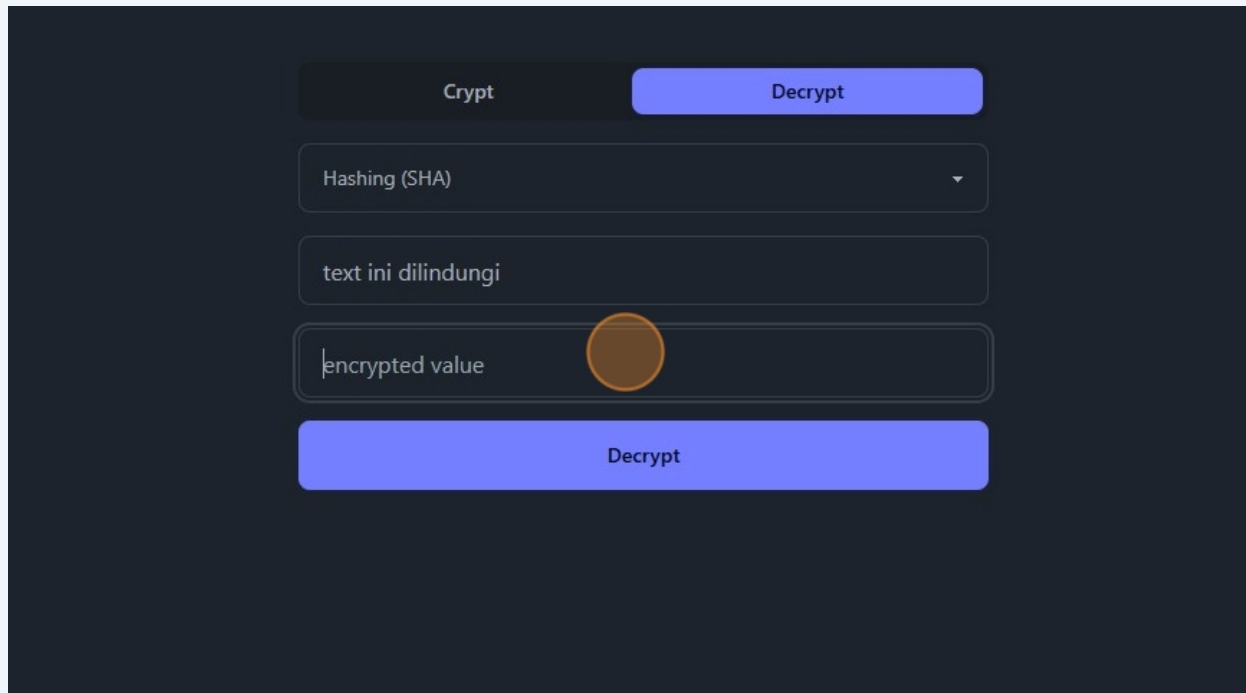

7 Click the "original value" field.

8 Type "text ini dilindungi"

9 Click the "encrypted value" field.

10 Press **ctrl + v**

11 Click "Decrypt"

The screenshot shows a web application interface with a dark background. At the top, there are two buttons: "Crypt" and "Decrypt". The "Decrypt" button is highlighted in blue. Below the buttons is a dropdown menu labeled "Hashing (SHA)". Underneath the dropdown is a text input field containing the text "text ini dilindungi". Below the input field is a text area containing a long alphanumeric string: "dba0cd7e634aef2ca63b2d8de492f90d337150b221ec6960f13f0l". At the bottom, there is a large blue button labeled "Decrypt", which has a circular orange highlight over it.

12 Click "Encryption value using sha success, value and hashing value matched"
